**Report – Report can be typed or hand written for up to two pages.**

### **Ace corporate Interview:**

- Explain the importance of an interview
- Imbibe the skills and expertise the interview requires.
- Identify the engagement rules of a face-to-face interview.
- Know how to answer the interview questions effectively
- List DO's and Don'ts of an effective interview.
- Develop a good opening and closing interview strategy
- identify your strengths and weaknesses
- Describe the steps to get general information about the organization.

### **Learn Corporate Etiquette:**

- The importance of business etiquette.
- The basic rules of business etiquette.
- To follow the right business attire.
- To follow cubicle Etiquette.
- To practice the Do's and Don'ts of internet and meeting Etiquette.

### **Effective Email:**

- To write an email using the structure of an Email.
- To write an effective subject line and text.
- To use a few opening and closing phrase.
- To use correct spellings and grammar.
- The Do's and Don'ts of Email writing.
- To follow your company's Email policy.
- The importance of responding to the Emails promptly.

### Version 1.2: Code

I added lines 10 and 11 to make sure the program returns the definition of acronyms (e.g., USA or NATO.)

```

1 import json
2 from difflib import get_close_matches
3 data = json.load(open("data.json"))
4 def translate(w):
5     w = w.lower()
6     if w in data:
7         return data[w]
8     elif w.title() in data:
9         return data[w.title()]
10    elif w.upper() in data: #in case user enters words like USA or I
11        return data[w.upper()]
12    elif len(get_close_matches(w, data.keys())) > 0:
13        yn = input("Did you mean %s instead? Enter Y if yes, or N if no: ")
14        if yn == "Y":
15            return data[get_close_matches(w, data.keys())[0]]
16        elif yn == "N":
17            return None
18        else:
19            return None
20 
```

**Course content**

- 8min
- 96. Version 1.1 (E) 1min [Resources](#)
- 97. Version 1.1: Code 1min
- 98. Version 1.2 (E) 1min
- 99. Version 1.2: Code 1min
- Section 14: Project Exercise with Python and MySQL: Interactive English Dictionary** 0 / 3 | 14min
- Section 15: Data Analysis with Pandas** 0 / 18 | 1hr 9min
- Section 16: Numpy** 0 / 5 | 25min
- Section 17: Application 2: Create Webmaps with Python and Folium** 0 / 16 | 1hr 20min
- Section 18: Fixing Programming Errors** 0 / 6 | 39min

**About this course**

A complete Python course for both beginners and intermediates! Master Python 3 by making 10 amazing Python apps.

Overview    Q&A    Bookmarks    Announcements

**Report – Report can be typed or hand written for up to two pages.**

### **Imported Modules:**

- **Builtin objects** are all objects that are written inside the Python interpreter in C language.
- **Builtin modules** contain builtins objects.
- Some builtin objects are not immediately available in the global namespace. They are parts of a builtin module. To use those objects the module needs to be **imported** first. E.g.:

```
import time
```

```
time.sleep(5)
```

- **A list of all builtin modules** can be printed out with:

```
import sys
```

```
sys.builtin_module_names
```

- **Standard libraries** is a jargon that includes both builtin modules written in C and also modules written in Python.
- **Standard libraries** written in Python reside in the Python installation directory as *.py* files. You can find their directory path with `sys.prefix`.
- **Packages** are a collection of *.py* modules.
- **Third-party libraries** are packages or modules written by third-party persons (not the Python core development team).

### **Application 1: Build an Interactive English Dictionary**

- The session made building of a dictionary very simple, the concepts of accessing a file like opening and reading were practically implemented.
- The concept of importing modules and finding out the existing libraries to make out work simple and easy was one of the goals of this section.
- The concept of nested conditional statements was put in to practice. A simple yet effective program to implement a dictionary through the command line.
